

## **ABSTRACT**

***Muhammad Ridwan Maulana (12130148), Design of Web-Based Student Registration Information System At the International School of Economics of International Tourism (STEIN) Jakarta.***

*On campus the registration system for new students is still done manually by coming to campus to obtain the registration form, and the campus must process the data of prospective students who go in for the sake of administration. Data that is not stored in the database would potentially be easily lost and even damaged, then the student announcement received still done manually delivered through the information board, of course if the prospective students are in different areas and the distance is far will slow the delivery of information so that Prospective students can not know the results of the announcement quickly. With the design of registration information system new student candidates by using this web-based waterfall method, then the things mentioned above can be resolved so that no longer have to come to the campus simply by accessing the web has all been facilitated.*
