

ABSTRACT

Yusuf Darmawan (12140346), ANDROID-BASED INDIVIDUAL FINANCIAL NOTE APPLICATION DESIGN

Financial records are financial planning in budgeting, management, control of funds deposited for financial decisions effectively and efficiently. Financial records including income, budget plans, and assets are all regulated in and out so that all funds remain monitored. This individual financial record application is one of the android smartphone applications which has an important role for the needs of budget planning and daily financial management. With the application of individual financial records it will be easier for users to record every transaction such as income and expenses incurred. As well as with this application, the user will minimize errors or omissions during the process of entry transactions or budget expenditures. This application is offline, making it easier for users to access this application anywhere and anytime. There are several tools used during the process of making this Individual Financial Note Application, including: using Android studio as a program editor and Adobe Photoshop as an image editing for the application created. This application can be used as a solution for users who have problems in financial recording with the number of transactions of expenses and income that is very much every day, then must calculate and write all the notes of each transaction that has been done in the book of records.
