# MODUL Web Programming I

Oleh

Yustina Meisella Kristania

Program Studi Sistem Informasi Sekolah Tinggi Manajemen Informatika dan Komputer Nusa Mandiri Jakarta 2018

# **Membuat Site Definition**

**Site Definition** merupakan hal penting dalam mengkolaborasikan antara Dreamweaver dan PHP. Site definition pada dasarnya mendefinisikan dimana letak penyimpanan file (situs), menggunakan teknologi server apa, menggunakan database apa, bagaimana koneksi dengan server dll. Dengan adanya site definition akan memudahkan developer untuk membangun situs web. Begitu pula, kesalahan dalam penentuan site definition akan berpengaruh terhadap pembuatan situs web.

- 1. Buka Macromedia Dreamweaver 8
- 2. Pilih menu **Site > New Site**.

ile Edit View	Insert Modify	Text Commands S	ite Window Help	
Forms *			New Site	
	I		Manage Sites	
			Get	Ctrl+Shift+D
			Check Out	Ctrl+Alt+Shift+D
		-	Put	Ctrl+Shift+U
			Check In	Ctrl+Alt+Shift+U
		C	Undo Check Out

			Locate in Site	
		Open a	Reports	
		adr	Synchronize Sitewide	
		adr	Check Links Sitewide	Ctrl+F8
		adr	Change Link Sitewide	
		a adr	Advanced	

3. Akan ditampilkan window **Site Definition**. Tentukan (1) nama situs, (2) alamat situs dan klik tombol (3) Next. Perhatikan gambar.

ite Definition for penjualan_nim	×
Basic Advanced	
Site Definition	
Editing Files Testing Files Sharing Files	
A site, in Macromedia Dreamweaver, is a collection of files and folders that corresponds to a website on a server. What would you like to name your site?	
penjualan nim	
Example: mySite	
What is the HTTP Address (URL) of your site?	
http://localhost/penjualan_nim 2	
Example: http://www.myHost.com/mySite	
If you want to work directly on the server using FTP or RDS, you should <u>create an FTP or RDS</u> server <u>connection</u> . Working directly on the server does not allow you to perform sitewide operations like link checking or site reports.	
< Back Cancel	Help

4. Selanjutnya kita harus menentukan apakah akan menggunakan teknologi server (1) dan teknologi server apa yang akan digunakan (2). Karena kita akan menggunakan PHP dan MySQL maka pilih teknologi server **PHP MySQL** (2). Klik tombo (3) **Next** > untuk melanjutkan.

5. Proses selanjutnya akan ditanyakan bagaimana kita bekerja dengan file kita selama proses development (1). Jika kita membuat file di komputer kita sendiri atau di

komputer lokal, maka pilih **Edit and test locally (my testing server is on this computer)**. Tentukan juga letak penyimpanan file-file situs

(2). Letak file penyimpanan situs php tidak boleh sembarangan, harus di **DOCUMENT ROOT**. Misal : C:\xampp\htdocs\penjualan\_nim

6. Window selanjutnya akan ditampilkan halaman untuk *testing server*. Tentukan alamat situs web (biasanya berupa http://localhost/nama-folder-penyimpanan/). Jika diperlukan kita dapat mencoba alamat URL tersebut sudah benar atau belum dengan menekan tombol **Test URL** (2) dan jika sudah benar akan ditampilkan pesan konfirmasi (3). Klik tombol **Next** (4) untuk melanjutkan.

Site Definition for penjualan_nin	1	×
Basic Advanced		
Site Definition		
Editing Files Testing Files	Sharing Files	
Dreamweaver communicate to know the URL of your site What URL would you use to	is with your testing server using HTTP (just like a browser), so it needs s's root folder. a browse <b>ta</b> the root of your site?	
http://localhost/penjualan_	nim	
Example: http://ServerOne/	'RootFolder/	
	Macromedia Dreamweaver	
	The URL Prefix test was successful.	
	ОК	
	4 Cancel	Help

7. Pada window selanjutnya akan ditanyakan apakah akan menggunakan komputer remote. Pilih No (1)

jika tidak menggunakan komputer remote. Pilih Next (2) untuk melanjutkan.

8. Selanjutnya akan ditampilkan **Site Summary** (1) yang menampilkan setting yang telah dilakukan. Klik **Done** (2) untuk mengakhiri proses pendefinisian situs.

Site Definition for penjualan_nim
Basic Advanced
Site Definition
Summary
Your site has the following settings:
Local info: Site Name: penjualan_nim Local Root Folder: C:\xampp\htdocs\penjualan_nim\
Remote info: Access: I'll set this up later.
Testing server: Access: Local/Network Remote Folder: C:\xampp\htdocs\penjualan_nim\
Your site can be further configured using the Advanced Tab.

#### Membuat Halaman PHP

Dalam praktikum ini akan dijelaskan bagaimana membuat halaman baru di situs yang telah didefinisikan di praktikum sebelumnya. Setelah selesai membuat situs maka akan tampil situs site pada menu files

<b>▼</b> Fi	les				- 12
Files	Assets	Snipp	oets		
De pe	enjualan_nin	n 🔻	Loc	al vier	w •
60	C V B	Û	Ū√	1	
6	Site - pen	jualan	_nim	(C:\xa	yqqm

# Membuat folder dan file pada site penjualan\_nim

Langkah-langkahnya adalah sebagai berikut:

1. Klik kanan site penjualan\_nim, pilih new folder, kemudian buatlah folder admin, image dan member, kemudian akan tampil folder-folder yang kita buat tadi.

2. Klik kanan site folder admin, pilih new file, kemudian buatlah file outputbarang.php, inputbarang.php, editbarang.php dan search barang.php. kemudian akan tampil file-file yang kita buat tadi

# Membuat connection

Sebelum membuat connection aktifkan terlebih dahulu salah satu files pada table admin misalnya outputbarang.php dengan cara double klik file tersebut.

Untuk membuat connection langkah-langkahnya adalah sebagai berikut:

1. Buka menu Application, pilih menu Databases, pilih tanda plus [+], kemudian pilih MySQL Connection

- 2. Maka muncul kotak dialog MySQL Connection
  - Isikan nama koneksinya(1),
  - isikan nama server yang digunakan (2),
  - isikan user name (3),
  - pilih database yang akan digunakan (4),
  - klik ok jika semuanya sudah fix (5)

Connection name: MySQL server: User name: Password: Database:	cs_tokoonline 1 localhost 2 root 3 tokoonline	Select 4	Cancel Test Help	Select Database Select database:	performance_schema phpmyadmin smp1 text Tokoonine Uugas_L23 Uugas_L23		OK Cancel Help
---	--	----------	------------------------	-------------------------------------	---	--	----------------------

**3.** Setelah berhasil maka akan muncul connection yang kita buat tadi pada menu files databases dengan table yang ada pada databasesnya. Dan secara otomatis pada site penjualan\_nim akan menambah folder dan file connection.

Get More Data Sources	
	Application tabas Bindings Server B Com Document type:PHP Recordset (Query) Form Variable URL Variable Session Variable Cookie Variable Server Variable Environment Variable Get More Data Sources

- 3. Maka akan muncul jendela Recordset
  - ketikan nama recordset(1),
  - pilih koneksi yang digunakan(2),
  - pilih table yang digunakan(3),
  - pilih columns yang akan dipakai all untuk semua column sedangkan selected untuk column terpilih (4),
  - pilih filter None karena dalam halaman outputbarang.php kita tidak menggunakan filter(5),
  - klik OK(6)

Name:	rs_outputbarang	1		6 or
Connection:	cs_tokoonline	2 • De	fine	Cancel
Table:	tb_barang 3	•		Test

- 14. Mengatur delete record
  - Blok "delete"
  - Pilih menu Application -> Server Behaviour -> [+]
  - Pilih delete record
  - Muncul jendela delete record
  - Akan ditampilkan window Delete Record (lihat gambar). Pada window tersebut, aturlah
  - (1) jenis variabel yang akan dijadikan penentu proses hapus dieksekusi atau tidak,
  - (2) koneksi,
  - (3) nama tabel yang digunakan,
  - (4) kolom yang dijadikan primary key di database beserta nilainya,
  - (5)url primary key yang kita buat sebelumnya(delete)
  - (6) halaman yang ditampilkan jika proses hapus mahasiswa berhasil.
  - (7) Klik tombol OK untuk menutup window dan menyimpan pengaturan.

# Halaman editbarang.php

1. Desain halaman editbarang.php sesuai dengan kebutuhan
Update Barang
Kd barang

Kd_barang:	<u>M</u>	
Nm_barang:		
Spesifikasi:		
Harga:		
Gambar:		Browse
Stok:		
Status:		
Keterangan:		
	Update record	

2. Pilih menu Application -> Binding -> [+] -> Recordset (Query)

- 3. Muncul jendela recordset
  - ketikan nama recordset(1),
  - pilih koneksi yang digunakan(2),
  - pilih table yang digunakan(3),
  - pilih columns yang akan dipakai all untuk semua column sedangkan selected untuk column terpilih (4),
  - pilih filter kd\_barang (primary key) (5)
  - Ketikan URL Parameter yang kita buat pada link "edit" pada halaman outputbarang.php
     (6)
  - Klik OK

Name:	rs_editbarang	1	3	ОК
Connection:	cs_tokoonline 2	•	Define	Cancel
Table:	tb_barang 3		•	Test
Columns:	All Selecter	ed:		Advanced
	kd_barang nm_barang spesifikasi harga gambar		* E	Help
Filter:	kd_barang	- = 5	•	
	URL Parameter	▼ edit	6	
Sort:	None	Ascending	-	

4. Maka akan terlihat recordset editbarang yang kita buat tadi

5. Isikan field(column) pada rseditbarang sesuaikan dengan table

	Undate Barang				Update Barang	
Kd barang			/	Kd_barang:	ø	
Nm barang:				Nm_barang:	{Recordset1.nm_baran	
Spesifikasi:				Spesifikasi:	{Recordset1.spesifikasi]
