

ABSTRACT

Danang Yudi Asmoro (11123597), *Web base Outdoor Gear sales information system on the real summit store – Jakarta*

The real summit outdoor store currently still using conventional system on their sales, therefor it takes long time for processing the transaction because its using manual system on given the transaction slip, and it take a lot more time for searching and finding available goods as it written on book and its quite hard for cashier to inform it to customers.

This observation is for making an online system web base for the real summit store. the methods are library base, observation, interview and designing program that explain om UML diagram. and for showing the relationship and entity of the system writer use ERD. System Design on the real summit store is using PHP language structure and mysql database.

The result of this application system hopefully can handle all the problems happens on conventional sales. whereas the transaction wont be using manual anymore, but it will use this online system for sales.
